

Motion2Scene: learning a hindsight obstacle distribution

Dataset-generating branch • 21,185 learned parameters • geometry-derived supervision • zero dynamics in generator fitting

(e) Why this is hindsight — and where physical teaching begins

Motion supplies its own geometric supervision.

Offline access to the complete motion allows hindsight labels.
Learn preference over fixed recipes, not a unique original room.
Chord / held-pose probes require separate physical qualification.

Separate physical qualification

Repair reference → execute compatible scene continuation
Measure goal hold, contact, fall, and termination
Only executed task evidence supplies positive action labels
